

**We provide 2 options of sedation for your dental procedures:  
General Anesthesia and IV Sedation**

**For Special Needs and Healthy Patients of Any Age**

**General Anesthesia:** Patients are rendered unconscious by breathing in anesthesia gases by mask. Other anesthesia medications are delivered by an IV line which is placed after you're asleep.

**IV Sedation:** Patients are placed in a deeply relaxed state. Patients are provided with sedation medications through an IV line. The IV is placed and the sedation medications are administered.

**Reasons for Considering Sedation:**

1. Any patient who is unable to tolerate dental procedures without sedation (IV) or being asleep (general anesthesia).
2. Special Needs populations such as learning disabilities, Autism, etc.
3. Children who are fearful of dental procedures.
4. Patients needing extensive dental procedures or surgery. This includes multiple extractions and/or dental implants and removal of wisdom teeth.
5. Severe phobia for routine dental procedures. Severe gag reflex or inability to become numb.

**GENERAL ANESTHESIA DENTISTRY OF MICHIGAN  
AT SOUTHFIELD FAMILY DENTAL CENTER**
